Abstract

Purpose Scientific and clinical achievements in radiation, medical, and surgical oncology are changing the landscape of interdisciplinary oncology. The German Society for Radiation Oncology (DEGRO) working group of young clinicians and scientists (yDEGRO) and the DEGRO representation of associate and full professors (AKRO) are aware of the essential role of radiation oncology in multidisciplinary treatment approaches. Together, yDEGRO and AKRO endorsed developing a German radiotherapy & radiation oncology vision 2030 to address future challenges in patient care, research, and education. The vision 2030 aims to identify priorities and goals for the next decade in the field of radiation oncology.

Original German phrase: *Innovative Radioonkologie im Team – Präzise, Personalisiert, Menschlich.*

Shared first authorship: D. Krug and M. Hecht; shared senior authorship: T. Gauer and M. Niyazi.

List of all participants of the yDEGRO/AKRO Retreat November 15, 2019 (in alphabetical order) Irenäus A. Adamietz, Christoph Arnold, Christian Baues, René Baumann, Claus Belka, Oliver Blanck, Kerstin Borgmann, Volker Budach, Wilfried Budach, Stephanie E. Combs, Nils Cordes, Stefanie Corradini, Christian T. Dietzel, Sophie Dobiasch, Yvonne Dzierma, Nadja Ebert, Michael J. Eble, Franziska Eckert, Astrid Faller, Julius Fischer, Thomas Fischer, Daniel F. Fleischmann, Emmanouil Fokas, Benjamin Frey, Ute Ganswindt, Tobias Gauer, Hans Geinitz, Frank A. Giordano, Christian Graeff, Burkhard Greve, Anca-Ligia Grosu, Maja Guberina, Nika Guberina, Daniel Habermehl, Franziska D. Hauth, Uwe Haverkamp, Christoph Henkenberens, Julia Heß-Rieger, Juliane Hörner-Rieber, Stefan Joos, Lukas Käsmann, David Kaul, Diana Klein, Mechthild Krause, David Krug, Kirsten Lauber, Anastassia Löser, Matthias Mäurer, Nils H. Nicolay, Maximilian Niyazi, Katia Parodi, Cordula Petersen, Florian Putz, Felicitas Rapp, Thorsten Rieckmann, Daniela Schmitt, Annemarie Schröder, Andrea Schwahofer, Clemens Seidel, Elena Sperk, Sarah Stefanowicz, Christoph Straube, Martin Stuschke, Kristian Unger, Vincenzo Valentini, Cläre von Neubeck, Andrea Wittig, Marcus Zimmermann

Extended author information available on the last page of the article

Methods The vision development comprised three phases. During the first phase, areas of interest, objectives, and the process of vision development were defined jointly by the yDEGRO, AKRO, and the DEGRO board. In the second phase, a one-day strategy retreat was held to develop AKRO and yDEGRO representatives' final vision from medicine, biology, and physics. The third phase was dedicated to vision interpretation and program development by yDEGRO representatives.

Results The strategy retreat's development process resulted in conception of the final vision "Innovative radiation oncology Together – Precise, Personalized, Human." The first term "Innovative radiation oncology" comprises the promotion of preclinical research and clinical trials and highlights the development of a national committee for strategic development in radiation oncology research. The term "together" underpins collaborations within radiation oncology departments as well as with other partners in the clinical and scientific setting. "Precise" mainly covers technological precision in radiotherapy as well as targeted oncologic therapeutics. "Personalized" emphasizes biology-directed individualization of radiation treatment. Finally, "Human" underlines the patient-centered approach and points towards the need for individual longer-term career curricula for clinicians and researchers in the field.

Conclusion The vision 2030 balances the ambition of physical, technological, and biological innovation as well as a comprehensive, patient-centered, and collaborative approach towards radiotherapy & radiation oncology in Germany.

Keywords Vision development · Radiation therapy · Image guidance · Precision oncology · Career development

During recent years, physical, technological, and clinical developments have led to improvements in radiation therapy precision, minimally invasive surgery, molecular targeted drugs, and immunotherapy. Radiation therapy plays an essential role in various multidisciplinary cancer treatment concepts in nearly all tumor entities in both curative and palliative intent. In order to further guide future development and strengthen the role of radiation oncology, the German Society for Radiation Oncology (DEGRO) working group of young clinicians and scientists (yDEGRO) and the DEGRO representation of associate and full professors (AKRO) initiated the development of a vision for the future of radiotherapy & radiation oncology in Germany.

The process of vision development, its chronology, methodology, and the one-day strategy retreat held by the yDEGRO and AKRO is presented in Fig. 1. The final vision, "Innovative radiation oncology Together – Precise, Personalized, Human" (original German phrase *Innovative Radioonkologie im Team – Präzise, Personalisiert, Menschlich*) and the respective interpretation and program are summarized in Tables 1 and 2. Background material regarding the vision development process as well as supporting statements by the Working Group Radiation Oncology (ARO) of the German Cancer Society, the German Society of Medical Physics (DGMP), the German Society of Radiobiology Research (DeGBS), and the Professional Association of German Radiation Oncologists (BVDST) are given in the online supplement.

The interpretation of the term "Innovative radiation oncology" highlights the role of designing and initiating clinical trials and translational research, the development of individualized treatment concepts, and the identification of new indications for radiotherapy. The critical implementation steps are formation of a national strategy committee

for radiation oncology research and the expansion and coordination of third-party funded research.

The term "Together" reflects the aspect of team building within radiation oncology professions, i.e., radiation oncologists, medical physicists, radiation biologists, radiation therapists, and nursing staff. Additionally, "Together" emphasizes interdisciplinary team building among radiation oncology professionals, medical oncologists, physicians from other medical disciplines, and associated non-medical professionals, e.g., data scientists. The term also implies and emphasizes the promotion of young scientists and future scientific leaders. The central work program includes strengthening the multidisciplinary radiation oncology team and promoting closer collaborations both within and beyond radiation oncology departments, i.e., with cooperation partners. This considers a resident training rotation in cooperating disciplines, expanding clinician scientist programs, and establishing mentoring programs to inspire and encourage young researchers for a scientific career in translational research. Furthermore, the role of promoting inspiring medical, physical, and biological teaching is highlighted as a central mechanism to fascinate students for a career in radiation oncology.

The term "Precise" covers both the technical precision of image-guided adaptive radiation therapy and treatment with molecular targeted drugs within the context of multimodal oncologic treatments. The key work program involves expansion of imaging techniques and standardization of data acquisition and its use for approaches to artificial intelligence.

The term "Personalized" focuses on individualized treatment strategies that take into account biological, medical, and personal information and patients' needs. It also promotes the development of molecular, clinical, and imaging-based biomarkers for diagnosis, response evaluation,

Table 1 Interpretation and program of the German radiotherapy & radiation oncology vision 2030 "Innovative radiation oncology Together – Precise, Personalized, Human"

Innovative radiation oncology	Together	Precise	Personalized	Human
<i>Interpretation</i>	<ul style="list-style-type: none"> – Focus on preclinical research and clinical, prospective, randomized, multimodal, practice-oriented trials – Development of new, individualized treatment concepts – Identification of new indications – Internal team building involving all radiation oncology professions (radiation oncologists, medical physicists, radiation biologists, radiation therapists, nursing, and administrative staff) – Interdisciplinary team building with other oncological and medical disciplines as well as associated non-medical professionals – Multi-layered interaction with professional societies and other relevant regulatory, political, and funding organizations – Sustainable promotion of young scientists and future scientific leaders 	<ul style="list-style-type: none"> – Combination of radiation therapy with molecular targeted tumor therapeutics – Image-guided adaptive radiation therapy – Standardized and evidence-based technological quality requirements – Individualized treatment through processing of dosimetric and image data from clinical trials and routine clinical practice 	<ul style="list-style-type: none"> – Individualized treatment in view of biological, medical and personal characteristics and needs of patients – Implementation of molecular, clinical, and imaging-based biomarkers – Individualized treatment through processing of dosimetric and image data from clinical trials and routine clinical practice 	<ul style="list-style-type: none"> – Focus on the patient and her/his family – Define therapy goals taking into account the patients' ability to make decisions – Participation and promotion of "personalities" within the respective professions – Balancing of work and family life
<i>Program</i>	<ul style="list-style-type: none"> – Promotion of open communication in a respectful, creative working environment. Strengthening and empowering team members for intense exchange both within and between the radiation oncology professions. – Interdisciplinary, cooperative, and self-confident representation of radiation oncology in relation to medical and non-medical collaborative partners and political or regulatory bodies – Resident training rotation in cooperating disciplines (e.g., diagnostic radiology, internal medicine, palliative care) for sustainable interdisciplinary team building – Development of personalized and contractually secured programs for the sustainable qualification of future scientific leaders – Promotion of defined career paths/positions with focus on patient care, research, and teaching (cf. NCCN) – Development of national quality standards on implementing new technologies – Expanding professorships of basic research and of translational research 	<ul style="list-style-type: none"> – Extension of combination therapy towards targeted tumor therapeutics – Further development of imaging techniques for image-guided radiation therapy – Establishment of national programs for clinical assessment of high-end technologies – Promotion of industrial technology development based on clinical needs and evidence – Establishment of national concepts and collaborations for machine learning and artificial intelligence – Standardized procedures in data acquisition of clinical data and study registries 	<ul style="list-style-type: none"> – Patient-centered communication as part of the resident training in radiation oncology – Acquisition of the patient's treatment history, the biology of the disease as well as individualized treatment goals into national database – Development of scores for patient classification based on large database analysis – Promoting integration of high-quality, translational research in the design of clinical trials (bench to bedside and back) – Testing and evaluation of new combination therapies 	<ul style="list-style-type: none"> – Systematic and continuous recording of treatment relevant side effects and symptom relief by the patient-reported outcomes (PROs) approach to quantify quality of life – Promotion of supporting programs (exercise, diet, etc.) – Comprehensive psychosocial support for patients – Development of dedicated work models to ensure work-life balance – Consideration of parenthood as an integral part of the academic career

Table 2 Interpretation und Programmatik der Zukunftsvision 2030 „Innovative Radioonkologie im Team – Präzise, Personalisiert, Menschlich“ der Strahlentherapie & Radioonkologie in Deutschland

	Innovative Radioonkologie	Im Team	Präzise	Personalisiert	Menschlich
<i>Interpretation</i>	<ul style="list-style-type: none"> Fokussierung auf praktische Forschung sowie, prospектив, randomisierte, multimodale und praxisrelevante klinische Studien Entwicklung neuer individualisierter Therapiekonzepte Identifikation neuer Indikationen Nachhaltige Förderung des wissenschaftlichen Nachwuchses und wissenschaftlicher Führungskräfte 	<ul style="list-style-type: none"> Fachinterne Teambildung der strahlentherapeutischen Berufsgruppen (Strahlentherapeuten, Medizinphysiker, Strahlenbiologen, MTRA, MFA und Pflegepersonal) Fachübergreifende Teambildung mit anderen onkologischen, medizinischen und nicht-med. Fächern Vielschichtige Interaktion mit Fachgesellschaften/Fachverbänden und anderen politischen, regulatorischen Instanzen und Förderinstitutionen Nachhaltiges und wissenschaftlicher Führungskräfte 	<ul style="list-style-type: none"> Kombination mit molekular zielgerichteten Tumortheraeutika Bildgeführte adaptive Strahlentherapie Standardisierte und evidenzbasierte technologische Qualitätsanforderungen 	<ul style="list-style-type: none"> Therapieindividualisierung hinsichtlich biologischer, medizinischer und persönlicher Merkmale und Bedürfnisse der Patienten Implementierung von molekularen, klinischen und bildgebenden Biomarkern Individualisierung der Behandlung durch dosimetrische und bildgebende Datensätze aus klinischen Studien und Routineverfahren 	<ul style="list-style-type: none"> Patienten und Angehörige in den Mittelpunkt stellen Therapieziele festlegen unter Beachtung der Entscheidungsfähigkeit der Patienten Partizipation und Förderung von „Personlichkeiten“ innerhalb der Berufsgruppen Vereinbarkeit von Beruf und Familie
<i>Programmatik</i>	<ul style="list-style-type: none"> Etablierung eines nationales Gremiums zur Strategieentwicklung für radioonkologische Forschung Steigerung der klinischen Expertenz durch: 1. Etablierung eines nationalen Studienverzeichnisses, 2. Etablierung eines nationalen, strahlentherapeutischen Versorgungsregisters, 3. Ausbau von prospektiven kontrollierten Studien und klinischen Registerstudien Ausdehnung und fachspezifische Koordinierung der Drittmittefforschung Zeitnahe Implementierung klinischer Studienergebnisse durch rasche Adaption der Fachempfehlungen (vgl. NCCN) Entwicklung nationaler Qualitätsstandards zur Implementierung neuer Technologien Ausbau von Lehrstühlen für Grundlagenforschung und Lehrstühlen mit transnationaler Ausrichtung 	<ul style="list-style-type: none"> Förderung einer offenen Kommunikation in einer respektvollen, kreativen Arbeitsumgebung, Stärkung und Befähigung von Teammitgliedern zum intensiven Austausch sowohl innerhalb, als auch zwischen den strahlentherapeutischen Berufsgruppen Fachübergreifende, kooperative und selbstbewusste Repräsentation der Radioonkologie gegenüber medizinischen und nicht-medizinischen Kooperationspartnern sowie politischen oder regulatorischen Instanzen Rotation in kooperierende Disziplinen (z.B. diagnostische Radiologie, Innere Medizin, Palliativmedizin) für eine nachhaltige fachübergreifende Teambildung Entwicklung von personalisierten und vertraglich gesicherten Maßnahmen zur nachhaltigen Ausbildung von wissenschaftlichen Führungskräften Förderung von definierten Karrierewegen/Platzstellen, die eine Schwerpunktbildung bzw. eine Kombination aus Patientenversorgung, Forschung und Lehre vorsehen Ausbau von Clinician-Scientist- und Mentoring-Programmen; Monitoring für fachpolitische Fragen; klinisches Hospitationsprogramm für Strahlenbiologen 	<ul style="list-style-type: none"> Weiterentwicklung der Kombinationstherapie in Richtung zielgerichteter Tumortheraeutika Weiterentwicklung von bildgebenden Verfahren für die bildgeführte Strahlentherapie Etablierung nationaler Programme zur Analyse und Bewertung des klinischen Nutzens moderner Technologien Förderung einer industriellen Technologieentwicklung mit Bezug auf klinischen Bedarf und Evidenz Etablierung nationaler Konzepte und Kooperationen zum Einsatz von maschinellem Lernen und künstlicher Intelligenz Förderung einer begleitenden medizinischen, physikalischen, biologischen Lehre als zentralen Mechanismus zur Gewinnung von Nachwuchs für die Strahlentherapie 	<ul style="list-style-type: none"> Fokus auf ganzheitlichen Aspekt der Onkologie Erfassung der Biologie der Erkrankung, der Anamnese sowie der persönlichlichen Behandlungsziele der Patienten in einer bundesweiten Datenbank Entwicklung von Scores zur Patientenklassifizierung auf Grundlage großer Datenbanken Förderung der Integration hochwertiger transnationaler Forschung in das Design klinischer Studien (bench to bedside and back) Erprobung und Prüfung neuer Kombinationstherapien 	<ul style="list-style-type: none"> Patientenzentrierte Gesprächsführung als Teil der radioonkologischen Facharztausbildung Systematische und kontinuierliche Erfassung therapierelevanter Nebenwirkungen und von Symptomlinderung im Sinne von Patient Reported Outcomes (PROs) zur Quantifizierung der Lebensqualität Förderung von therapiebegleitenden Programmen zur Bewegung, Ernährung etc. Umfassende psychoonkologische Betreuung der Patienten Entwicklung von spezifischen Arbeitszeitmodellen zur Vereinbarkeit von Beruf und Familie Berücksichtigung von Familienzeiten als integrativen Bestandteil einer akademischen Laufbahn

Fig. 1 Development process of German radiotherapy & radiation oncology vision “Innovative radiation oncology Together – Precise, Personalized, Human.” ¹German Society for Radiation Oncology (DEGRO) working group of young clinicians and scientists and ⁶its alumni representatives as a link between young scientists and executives/leaders in radiotherapy and radiation oncology in Germany. ²Representation of associate and full professors of the DEGRO. ³German Society for Radiation Oncology. ⁴German Consortium for Translational Cancer Research. ⁵European Society for Radiotherapy and Oncology. ⁷Professional Association of German Radiation Oncologists. ⁸German Society of Medical Physics. ⁹German Society of Radiobiology Research. ¹⁰Working Group Radiation Oncology of German Cancer Society

and prognosis. The key work program includes establishing a database for multicentric collection of clinical and biological data from routine practice and clinical trials. It also addresses the integration of high-quality translational research into the design of clinical trials (from bench to bedside and back). Data analysis and classification are based on methods of medical informatics.

The term “Human” underlines the need for a continuous patient-centered approach in radiation oncology. Innovation in radiation oncology serves to improve overall patient outcome and quality of life. Patients are empowered to make conscious, informed decisions about their treatment. Furthermore, this term emphasizes the promotion of “personalities” within the respective professions and acknowledges the need to promote flexible solutions and individual career paths to balance work and family life and open up long-term academic career pathways that cater to individual needs and strengths. The key work agenda contains the establishment of a resident training program for patient-centered communication and the facilitation of comprehensive programs for psycho-oncologic support, diet counselling, and physical exercise for cancer patients. Patient-reported outcomes (PROs) should be regularly measured in clinical trials and clinical routine.

In conclusion, the vision 2030 for radiotherapy & radiation oncology in Germany reconciles the ambition of physical, technological, and biological innovation as well as a comprehensive, patient-centered, and cooperative approach in oncology.

Supplementary Information The online version of this article (<https://doi.org/10.1007/s00066-021-01843-9>) contains supplementary material, which is available to authorized users.

Acknowledgements We would like to thank Claus Belka (“DEGRO—Where Do We Come From?”), Stefan Joos (“Vision Development of the German Consortium for Translational Cancer Research”) and Vincenzo Valentini (“Way to ESTRO Vision 2030 and Lessons Learned”) for their introductory talks at the yDEGRO/AKRO strategy retreat. We thank Ilse Neuenhofen and Marcel Körrenz from “being to inspire” for their vital support regarding preparation and moderation of the yDEGRO/AKRO strategy retreat (for further information, see online supplement). Furthermore, we acknowledge the valuable input and ongoing commitment of all members of the yDEGRO alumni group as well as Nils Cordes, Ute Ganswindt, Hans Geinitz, and Andrea Wittig during preparation of this manuscript. We thank Verena Jendrossek (DeGBS), Mechthild Krause (ARO), Franz-Josef Prott (BVDST), Dimos Baltas, and Daniela Schmitt (both DGMP) for the supporting statements on behalf of their respective organization. Last but not least, we thank Rainer Fietkau for his valuable support as DEGRO president during the process of vision development.
